\$50.00 complete nutrition/food testing evaluation

The chiropractic adjustment is the application of a specific directional thrust to a region or regions of the spine with the specific intent of correcting subluxations in the spinal segments. The chiropractic adjustment is made only after careful analysis and is delivered in a specific manner to achieve a pre-determined goal. It is a precise, delicate maneuver, requiring special bioengineering skills and deftness. Extremity, cranial and TMJ adjustments help to restore normal motion patterns in the effected joints or cranial bones. Organ work, called CMRT (Chiropractic Manipulative Reflex Technique) helps to balance organ function.
